

Lecture 12

Midterm Practice

CS61B, Spring 2026 @ UC Berkeley

Isabel Dong, Marcus Koh, Stacey Lei, Amy Wang, Daniel Wang

The screenshot shows the PrairieLearn interface for the course CS 61B, Spring 2026. The left sidebar contains navigation links: COURSE (CS 61B), Course instances, Questions (highlighted), Issues, Staff, Sync, Course files, and Course settings. The main content area shows the 'Preview' tab selected, with a blue header 'Default Rotate to Front'. Below this, it says 'Fill in the rotateToFront method in Deque61B . Feel free to'. There are two buttons: 'Open workspace' and 'Save & Grade'. The 'Save & Grade' button is circled in red. To its right is a 'Save only' button. At the bottom, there is a 'COURSE INSTANCE' dropdown set to 'Sp26'.

**PRESSING THIS BUTTON
TWICE LOSES POINTS**

Who Are We? 🐾🐾

Marcus Koh: CS + Physics, 3rd year.
Skiing, travel, penguins, robots, space,
boba, puzzle games, NBA, SEAHAWKS.

Stacey Lei: CS, 4th year.
I'm allergic to Amy's cats.

Isabel Dong: CS + Business,
3rd year. I <3 WBB, Snoopy,
puzzle games, Smiskis,
pickleball, and (most
importantly) **CS 61B** 🐝! I'm
not allergic to Amy's cats.

Amy Wang: CS + CogSci, 3rd
year. I like my cats.

Daniel Wang:
CS, 4th year.
Graphic design,
fashion,
snowboarding,
badminton,
climbing.

Midterm 1

- Next week: Monday (2/23) - Thursday (2/26)
- Familiarize yourself with the [CBTF Getting Started for Students](#) Page
- Exam is uncurved, no cheat sheet

CBTF HW 4

- Four problems to solve on Prairie Learn in the exact same format as the exam
- Due Friday, 2/20

1. Read the problem carefully
 2. Create test cases
 3. Write implementation
 4. Test code
 5. Repeat
- 
- Repeat as necessary

Running the Autograder

LLD Add View... ▾

Fill in the `add` method in `LinkedListDeque61B`. Feel free to create any helper methods you'd like.

 Open workspace

Save & Grade Save only New variant

***Only submit to our autograder once you have tested your code

- Submitting to the autograder multiple times reduces your overall score by 25%** each time after the first run!
- The goal is for you to be comfortable enough with writing your own tests and using them as your source of truth

https://us.prairielearn.com/pl/course_instance/203530/assessment/2646553

Demo: LLD Add

- VS Code...just another IntelliJ! Check out HW 4 Task 1 + VS Code Guide.
- NullAnnotation popup can be ignored.
- How do we run tests?
 - Green play button right next to each test.
 - Output in Test Results.
 - Print statements in Debug Console.

What's This Method?

- Deque61B.java and LinkedListDeque61B.java look just like Project 1!
- add() is similar to addFirst() and addLast(), but with a specific index.
 - Allows us to add anywhere in the list.

- Why write tests?
 - Guide to see if your method works as expected.
 - Check to see if you understand what you want to write, **before** you write it.
 - Test-driven development!
- What should we test for?
 - Adding to the front, middle, end.
 - Checking size (must correctly update size).
 - Edge cases. But, we can “assume that idx is always within **[0, size)**.”
- How can we test for this?
 - toList() (iterating over the list)
 - Compare with another list using isEqualTo() (checking elements)
 - Or use containsExactly().inOrder()

Demo:

Rotate to Front

1. Read the problem carefully
 2. Create test cases
 3. Write implementation
 4. Test code
 5. Repeat
- 
- Repeat as necessary
