Introduction to Project 5

On project 5, you'll build a 2D interactive world.

- First: Random world generator.
- Second: Interactivity, i.e. you can walk around the world.
- Third: Ambition features, i.e. something unique and interesting about your project.

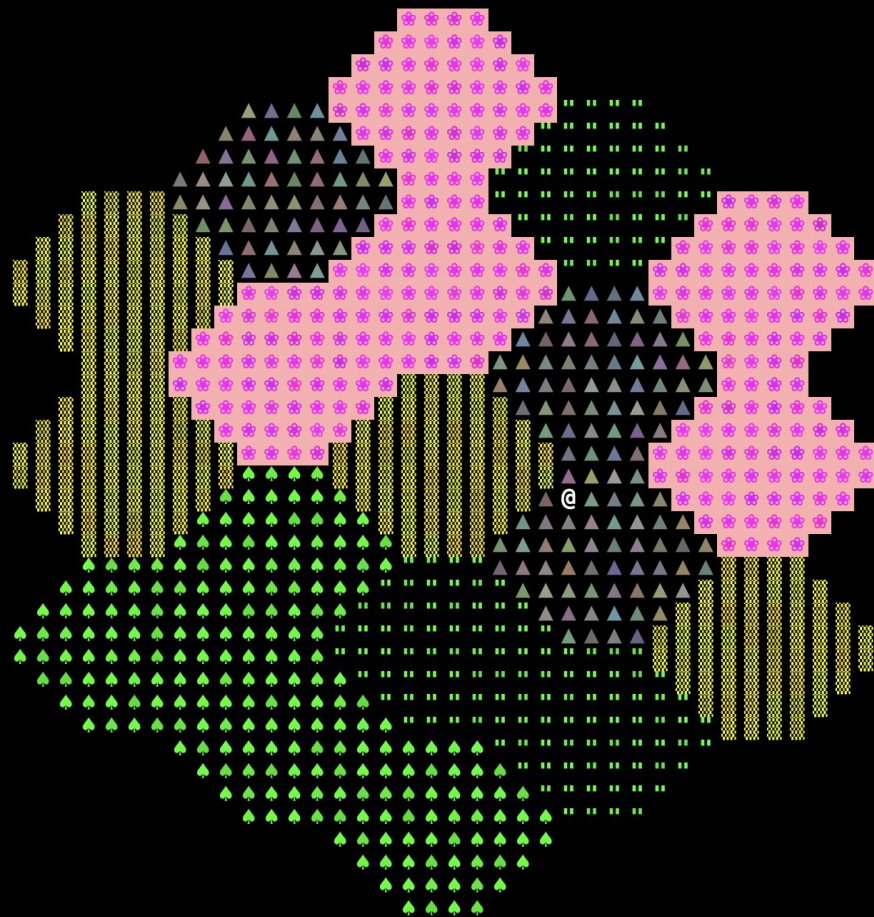

In today's lecture, we will try to build a Hex World generator, then we'll add interactivity.

- There is not enough time in lecture to do everything I want to do, so I will post supplementary videos for whatever we don't get to.
- DON'T FOCUS TOO MUCH ON THE CODE TODAY, pay attention to my process.

Next Up: Walking Around

Let's now add functionality to our code so that the player can walk around in the world.

These will be added later.
