

Q6.2: The definitions of "Possible" and "Impossible" should be:

Possible: It is always possible to do this (regardless of hash function) given sufficient computing power and time

Impossible: It is not always possible to do this

Q6.2 c: All names in the HashMap should be slow to access, not just one chosen name.

Q8: In multiplyAll, "values.insert" should be "values.add" to be consistent with the reference card
