Agenda

- Midterm Prep Tips & Question Time
- Kahoot

Midterm Review

Midterm Logistics Overview

- 1 Hour Long during our normal lecture time
- Similar format to the Problem Sets: Think standalone short answer/analysis questions and a couple/few longer problems with multiple parts
- Covers textbook chapters 1-6 (up to and including the Romer model, or everything through PSET 2)
- 1 page 2-sided cheat sheet allowed – either typed or handwritten!
- Simple (scientific) calculator allowed, graphing calculator not allowed (Bring a ruler if you want!)

Midterm Studying Suggestions

I have X number of hours to study. What should I do?

If you have 1-2 hours, focus your studying on the **graphs, intuition, and arguments** that are being made by the **Solow Model and Romer Model**. Study and put important facts about GDP and the overall economy onto your cheat sheet

If you have 3-4 hours, in addition to the previous, work **on graphical analysis** with the Cobb-Douglas, Solow Model, and Romer models. Work on a basic math review, including **understanding growth rates**

If you have 5+ hours, in addition to the previous, work on **understanding the mathematical intuition behind the models**. Think about how **real-life applications and scenarios** would play out under the conditions of the models. Look to **understand deeper nuances in the models**, such as MPL and MPK under the Solow model, differences in per-capita economy models vs whole economy models, and the power and limitations of the individual models

Question of the Day

What questions do you have for the Midterm exam?

What is your favorite post-Midterm activity?

Kahoot Time!
