

ECON100B - SECTION 24

Final Exam Review

Felix Zhang

ANNOUNCEMENTS/AGENDA

Announcements

- PSET 4 due Friday 5/1
- Thursday: Review Kahoot!
- Final Essay posted Monday 5/4, due Friday 5/15
- Final Exam Monday 5/11 3:00pm – 4:30pm

Agenda

- Today: Review Session!

Final Exam Logistics Overview

- 1.5 Hours Long from 3:00-4:30pm on Monday, 5/11
- Similar format compared to the midterm: Think standalone short answer/analysis questions and a couple/few longer problems with multiple parts
- Content will cover the entire class, but with a slight focus on the post-midterm content
- 1 page 2-sided cheat sheet allowed – either typed or handwritten!
- Simple (scientific) calculator allowed, graphing calculator not allowed (Bring a ruler if you want!)

Final Exam Studying Suggestions

Start by studying and **understanding the intuition and importance behind the primary models** that we've explored in this class:

- Solow Model
- Romer Model
- Short Run IS-MP-PC Model

If you have additional time, **study the additional models** that we've discussed in this class:

- The Labor Market Model
- Exchange Rate Models

Understand **how these models tie into both real world and hypothetical events**. How can these models explain growth rates across countries? How are financial crises and their responses explained by these models?

Final Exam Studying Suggestions

Once you have a good understanding of these models work on problem solving:

- I'd suggest starting with the Problem Sets and making sure you feel confident with the questions on the PSETs
- After that, try to tackle the previous two final exams that have been published

Class Concepts to Know

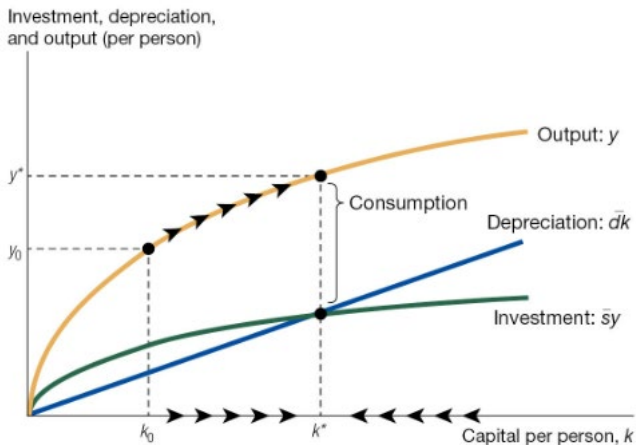

The Long Run

- GDP and its components
- Growth and its determinants
- The Solow Model and capital
- The Romer Model and ideas
- Long Run Foreign Exchange Rates

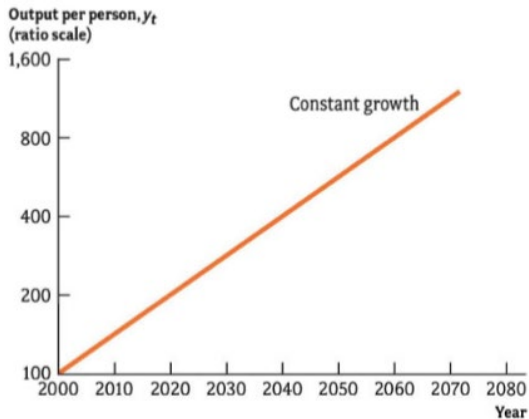

The Short Run

- Short Run output through the IS Model
- Monetary Policy and interest rates through the LM Model
- Inflation through the PC Model
- Unemployment/employment through the labor market model
- Recessions and real life macro-events
- Short Run Foreign Exchange Rates

The Solow Model

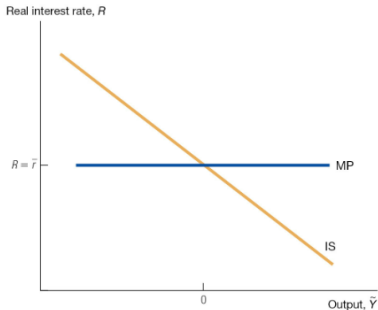

The Romer Model

IS/MP Model and PC

The MP Curve in the IS/MP Diagram

The Phillips Curve
